

Display Walls

BY BRAND RETAIL

Display Walls are a modular temporary walling system, made up of sections that are connected to form any length and shape of wall required. Display Walls don't need any special tools or specialist knowledge to put together. The system is super-lightweight and easy to build, just start with two panels forming a right angle and build from there. Changing from one configuration to another is also very simple. The Display Wall system is incredibly adaptable with endless possibilities for layouts. The only constraints are your imagination and the space available to you!

KEY FEATURES

- 1 Aluminium ladder frame. Extremely lightweight and super strong, the ladder frame forms the backbone of the whole system with each frame weighing just 14.4kg making it easy to manoeuvre. Frames are locked together using simple nuts and bolts.
- 2 The outer skins, complete with mounting bracket. Choose from a range of materials from aluminium composite board (DiBond), PVC foam boards and even foam core or display board - print directly to the panels or leave 'blank'. We'll help you select the best material for your needs.
- 3 Topped off with a cap that locks it all together. The cap has been designed to incorporate a standard gallery hanging rail so you can use off-the-shelf picture hanging hooks and wires plus lighting.

STANDARD UNIT SIZES

Height	Width	System Depth	Frame Weight
2420mm (8ft)	1200mm (4ft)	100mm (4inch)	14.4kg (31.75lbs)

MATERIAL SPECIFICATION
